SPRING LOADED NET TRAP INSTRUCTIONS

PTS590 590mm x 590mm x 50mm high bird trap

Suitable for small to medium species from Indian Mynas up to magpies

PTS960 960mm x 960mm x 50mm high bird trap

For larger birds from crows to ducks and peacocks

When making adjustments and fitting pecking tray or manual pin ensure the safety hook is in place preventing the trap from closing. While safety hook is in place gather net to the back and sides of the trap and clear of the pecking tray or manual trip assembly.

To fit the pecking pan slide through the two loops in the trip hinge up to the circlip, around 20mm of shaft should protrude through the other side. Once fitted, place the trap in the location it will be activated in and place seed or bait in the pecking tray. Using your wrist to hold down the spring loaded net assembly, disconnect the safety hook and place to the rear of the trap and out of the way of the net. Using your thumb and index finger position the latch bar under the pecking tray shaft and allow the net assembly to lock in place.

To fit the manual release remove the pecker pan from the trip hinge, slide the short pin through the two loops in the trip hinge, around 20mm of shaft should protrude through the other side. Attach a line or fishing line to the centre bar on the trip hinge and feed the line through the mesh and under the trap in the direction the line will be pulled from.

Once fitted place the trap in the location it will be activated in and place seed or bait in a small container in a similar position as the pecking tray.

Using your wrist to hold down the spring loaded net assembly disconnect the safety hook and place to the rear of the trap and out of the way of the net. Using your thumb and index finger position the latch bar under the pecking tray shaft and allow the net assembly to lock in place.

See our website www.traps.com.au for a demonstration video. Go to the PTS590 or PTS960 product page.
